

# **BioPharma Solutions + SAFC** Complete Support for Your ADC

## Simplifying Your Path to the Patient

### A Combined Approach

Baxter's BioPharma Solutions business (BPS) and SAFC, two of the leading contract manufacturing organizations (CMOs) in the ADC space, are offering a combined approach for your ADC to simplify the supply chain and provide comprehensive, coordinated and collaborative services for the development, manufacturing, and testing of bulk drug substance (BDS) and drug product (DP).

### Advantages x 2

Two experienced CMOs: BPS and SAFC have hands-on experience with more than 20 different ADC constructs.

A seamless transition between the manufacturing of your BDS and your DP – one less step to coordinate on your path to the clinic and commercialization.

The confidence you need to successfully deliver your ADC.

**Two (2) Global Leaders:** Both BPS and SAFC are business units of larger companies— Baxter Healthcare Corporation and Sigma-Aldrich Corporation, respectively—with strong financial stability, global reach, and the commitment to being exceptional service providers.

**Broad Range of Solutions:** Together we offer the complete range of services needed for antibody-drug conjugates (ADCs) – process development, technology transfer, analytical method development and validation stability studies for the bulk drug substance as well as the drug product, formulation, and fill/finish including lyophilization.

**SafeBridge Certification:** BPS: the only company worldwide with facilities certified by SafeBridge doing both parenteral drug substance synthesis and parenteral drug product manufacturing and testing. SAFC: SafeBridge Certified since May 2009. Both companies have dedicated facilities that are SafeBridge Certified to handle Category 4 compounds.

**Logistics Streamlined Globally:** With decades of experience in shipping products around the globe, BPS and SAFC will coordinate the necessary import/export requirements, documentation, and product handling between development/manufacturing sites, allowing you to focus on drug discovery.

**Quality + Experience:** BPS and SAFC have experience with a variety of antibodies, chemistries and payloads. Whether it is a well-established licensed payload, or a novel, highly potent toxin, you can be confident it will be handled safely with appropriate containment and personnel training.

## Complete Support for Your ADC

### ADC Services

- Formulation Development
- Analytical Development
- Process Development
- Linkers/Cytotoxic Agents
- Conjugation
- Fill/Finish

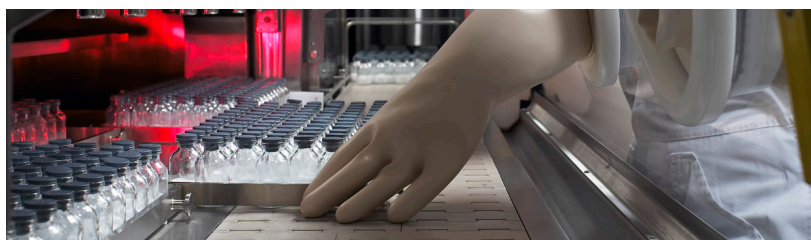

### Benefits

- Streamlined support, with dedicated project managers at each site working closely together to ensure a consolidated timeline and a transparent transfer, allowing you to focus on your discovery and development for the next programs in your pipeline.
- Supply chain consolidation that gives you comprehensive ADC services under one “virtual roof”.
- Reliable experienced partners with proven track records, able to successfully deliver your product and meet your timelines with high quality and on budget.

### Award-Winning CMOs x 2

*BPS was recently selected to be a finalist for the inaugural World ADC 2014 Awards as Best CMO, and was a winner in all 5 categories in the 2013 CMO Leadership Awards.*

*Sigma-Aldrich Corporation was again named in the top five on Newsweek's 2014 Green Rankings, putting it in the top 1 percent for environmental performance.*
